SUMMARY

Computer science graduate (Stony Brook, 2026) with four years of program operations for a 1,500-student summer program. Independently designs, directs, and ships AI-built web products, including a six-sport trivia platform and the program's own events platform. Looking for an operations, program, or product role that needs both.

EXPERIENCE

Program Activities Manager, The Brook Hill Alliance, New York, NY | June 2026 – August 2026

- Promoted from Activity Coordinator to run a 15-person team for a study-abroad program that brings ~1,500 students to St. John's University each summer. Trained 50+ staff and built a returner pipeline.
- Noticed on-campus activities had low turnout because there was no single place to see what was on or commit to going, so built and launched the program's events platform. Attendance and activity reviews both went up.
- Connected an AI agent to the master calendar and program databases to automate the website's daily updates, cutting out the manual publishing step.

Activity Coordinator, The Brook Hill Alliance, New York, NY | June 2023 – June 2026

- Planned and ran logistics (transportation, lodging, itineraries) for about 150 trips a season across the East Coast (Boston, DC, Niagara Falls), with no safety incidents.
- Main point of contact for staff, students, and program leadership; handled scheduling, safety, and logistics issues in real time.

PROJECTS

Elite Ball Knowledge, eliteballknowledge.web.app, live platform | 2026

- Shipped a six-sport trivia platform (NFL, CFB, NBA, MLB, NHL, soccer): daily player grids, higher/lower streaks, head-to-head play.
- Built a content pipeline that turns the game's own data (daily grid results, player pick rates) into short-form video via headless Chromium and ffmpeg, posted automatically to Instagram and YouTube Shorts, with performance feeding the next batch.

Brook Hill Events, brookhill-events.web.app, live site | 2026

- Handles schedules and shareable flyers for 70+ sessions and excursions, roster-verified RSVPs, tournament registration, song requests, and a staff dashboard with live rosters. Built on Firebase (Hosting, Firestore, Cloud Functions, Auth).

Outside the Box, browser puzzle game, Firebase Hosting | 2025

- HTML5 canvas puzzle game; finalist in the Stony Brook Game Development Club's 21st Annual Game Development Competition.
- Built the game as a 50-question certification exam (onboarding, timed sections, proctor feedback, a completion certificate), where every question rewards lateral thinking over the obvious answer.

EDUCATION

Stony Brook University, B.S. in Computer Science, May 2026 | Major GPA: 3.5

SKILLS

Operations: program and project management, team leadership (15 staff), event logistics, vendor and client coordination, cross-functional communication

Data and tools: SQL, Python, Excel and Google Sheets, Firebase, JavaScript/HTML/CSS, Git/GitHub, AI agent workflows and automation
